We recommend using network access control lists (ACLs) as firewalls to control inbound and outbound traffic at the subnet level. This Quick Start provides an option to create a network ACL protected subnet in each Availability Zone. These network ACLs provide individual controls that you can customize as a second layer of defense.

Network ACLs can be used for inbound or outbound traffic and provide an effective way to blacklist a CIDR block or individual IP addresses. These ACLs can contain ordered rules to allow or deny traffic based on IP protocol, service port, or source or destination IP address. Figure 3 shows the default ACL configuration for a VPC subnet.
