Fish physiology is the scientific study of how the component parts of fish function together in the living fish. It can be contrasted with fish anatomy, which is the study of the form or morphology of fishes. In practice, fish anatomy and physiology complement each other, the former dealing with the structure of a fish, its organs or component parts and how they are put together, such as might ...

Sleep Physiology in Adolescence. In addition to the developmental shifts that occur in circadian rhythms and sleep homeostasis during development, clear maturational changes are observed in the oscillatory physiology outlined above. These trajectories are likely driven by maturational modifications to brain anatomy during this time.
