MSc Environment and Development - LSE Home

Sustainable Development is the organizing principle for meeting human development goals while simultaneously sustaining the ability of natural systems to provide the natural resources and ecosystem services on which the economy and society depends. The desired result is a state of society where living conditions and resources are used to continue to meet human needs without undermining the integrity and stability of the natural system.

Sustainable development - Wikipedia

What Is Sustainable Management? Sustainable management is the intersection of business and sustainability. It is the practice of managing a firm's impact on the three bottom lines—people, planet, and profit—so that all three can prosper in the future. Sustainable management supports a business's long-term viability, because it's ...
