New in version 4.4: Use the lightness values of the brush tip image as a map to a gradient. Black maps to the left side of the gradient, and white to the right side of the gradient. The gradient used is the currently selected gradient in the main window, so you can change the gradient quickly and easily while painting.

Vignetting is a defect that darkens the corners of an image due to light falloff around the perimeter of the lens. Chromatic aberration appears as a color fringe along the edges of objects, caused by the lens focusing on different colors of light in different planes.. Some lenses exhibit different defects at certain focal lengths, f-stops, and focus distances.

Correct image distortion and noise in Photoshop

Sources. For most Unix systems, you must download and compile the source code. The same source code archive can also be used to build the Windows and Mac versions, and is the starting point for ports to all other platforms.

Most GUIs do one thing: collect information from the user and return it. From a programmer's viewpoint, this could be summed up as a function call that looks like this: `button, values = GUI_Display(gui_layout)` What's expected from most GUIs is the button that was clicked (e.g., OK, cancel, save, yes, no, etc.) and the values input by the user.

Add GUIs to your programs and scripts easily with ...
