This manual is relevant for hatcheries used in fishery stocking programs and captive aquaculture, while focusing on the former application. The manual includes three major topics: 1) biological principles underlying the genetics of fish, 2) genetic tools and their application to fish populations, and 3) genetic issues in fisheries management.

GENETIC GUIDELINES for FISHERIES MANAGEMENT

Electrofishing studies in the 1990s established that higher frequencies of pulsed DC (e.g., 60 Hz) generally result in more spinal injury to fish in comparison with lower pulse frequencies (e.g., 30 Hz). In response to those findings, some agencies adopted low pulse frequency standards to minimize fish injury.
